PROFESSIONAL SUMMARY

A BTech graduate in Information Technology with hands-on experience in Advanced Excel, SQL, Power BI, and Python for data analysis and machine learning. Proven ability to build end-to-end data pipelines, design interactive dashboards, develop ML and NLP classification models, and extract actionable insights from complex datasets. Seeking a Data Analyst role to leverage analytical skills and drive business intelligence initiatives.

Experience

Data Analyst Onsite

Good Health Company *May 2026 – Present*

- Data Analyst specializing in e-commerce data extraction, analysis, and reporting across multiple platforms.
- Proficient in SQL for data cleaning, transformation, and ensuring data accuracy and consistency.
- Skilled in advanced Excel functions, Pivot Tables, VLookup, XLookup and data analysis techniques for rapid decision-making.
- Design and develop interactive Power BI dashboards to visualize key performance metrics and business trends.
- Deliver actionable insights and data-driven recommendations that support operational efficiency and business growth.
- Collaborated with Marketing, Operations, and Management teams to provide data-driven insights and support business growth initiatives; presented daily, weekly, and monthly performance reports, enabling informed strategic decision-making.

SQL & Power BI Intern Remote

Besant Technologies *Jul 2025 – Aug 2025*

- Wrote and optimized advanced SQL queries using Joins, CTEs, Window Functions, and Subqueries, improving data accuracy and consistency by 30%.
- Conducted exploratory data analysis (EDA) on sales and operational datasets to identify trends, patterns, and anomalies supporting faster data-driven decision-making.
- Built interactive Power BI dashboards with DAX measures and custom visuals to track key performance indicators (KPIs) for stakeholder review.
- Automated weekly reporting workflows using Power Query, reducing manual data preparation time.

Projects

SQL Data Warehouse Project [GitHub] | *SQL Server, Star Schema, ETL Pipelines, Power BI* Jan 2026 – Feb 2026

- Designed and implemented a Medallion Architecture (Bronze–Silver–Gold) data pipeline processing 1M+ records with validation and transformation.
- Performed ETL operations to clean and structure raw data into analytics-ready datasets; built Gold layer fact and dimension tables optimized for KPI reporting.
- Developed 8+ automated KPI dashboards in Power BI for business performance tracking; optimized SQL queries reducing data retrieval time by ∼40%.
- Designed and deployed Gold layer aggregated views and data marts on top of a 1M-record warehouse pipeline, enabling self-service analytics for 5+ business teams and accelerating decision-making cycles by 60%.
- Generated actionable business insights through exploratory and advanced data analysis to support strategic decision-making.

Customer Churn Prediction Using Machine Learning | [GitHub] *Python, Pandas, NumPy, Scikit-learn, Power BI*

- Developed an end-to-end **Machine Learning model** to predict customer churn using demographic, tenure, service usage, and billing-related features.
- Performed **data preprocessing, missing-value treatment, categorical encoding, feature engineering, EDA, and feature selection** using Python.
- Implemented and compared **Logistic Regression, Decision Tree, Random Forest, and XGBoost** classification algorithms.
- Evaluated models using **Accuracy, Precision, Recall, F1-Score, ROC-AUC, and Confusion Matrix** to select the best-performing model.
- Identified key **churn drivers and high-risk customer segments**, providing data-driven recommendations to improve customer retention and reduce churn.

Spam / Not Spam Email Prediction (NLP) | [GitHub] *Python, NLTK, TF-IDF, Logistic Regression, Scikit-learn*

- Developed an **NLP-based email classifier** to predict **Spam vs. Not Spam (Ham)** using **TF-IDF vectorization** and **Logistic Regression**.
- Applied **text preprocessing** including lowercasing, punctuation and stop-word removal, tokenization, and stemming/lemmatization using NLTK.
- Converted text into numerical features using **TF-IDF (unigrams and bigrams)**; tuned hyperparameters with **GridSearchCV**.
- Evaluated using **Accuracy, Precision, Recall, F1-Score, and Confusion Matrix**; built a prediction pipeline to classify new, unseen emails.

Technical Skills

SQL & Databases: SQL Server, Joins, CTEs, Window Functions, Subqueries, Stored Procedures, Indexing, Data Warehouse
Visualization: Power BI (DAX, Data Modeling, Interactive Dashboards), KPI Reporting, Trend Analysis
Data Analysis: Advanced Excel, Pivot Tables, VLOOKUP/XLOOKUP, Power Query, Macros, EDA
Programming: Python (Pandas, NumPy, Matplotlib, Seaborn, Scikit-Learn, TensorFlow, NLTK)
Machine Learning: Supervised Learning, Classification, Logistic Regression, Decision Tree, Random Forest, XGBoost, Feature Engineering, Hyperparameter Tuning, Cross-Validation, Imbalanced Data Handling (SMOTE), Model Evaluation (Precision, Recall, F1, ROC-AUC)
NLP: Text Preprocessing, Tokenization, Stemming/Lemmatization, TF-IDF, Bag of Words, Text Classification, Spam Detection
AI & Deep Learning: Neural Networks (Basics), TensorFlow/Keras, Generative AI, Large Language Models (LLMs), Prompt Engineering, Fraud/Anomaly Detection, Predictive Analytics
Soft Skills: Problem Solving, Stakeholder Reporting, Critical Thinking, Attention to Detail, Team Work, Analytical Thinking
Core Skills: Data Cleaning, Data Visualization, Business Intelligence, Dashboard Development

Education

Kakatiya University Warangal, Telangana
Bachelor of Technology in Information Technology – CGPA: 8.22 / 10.0 *2021 – 2025*
